

EduGenie Project Executable Files

Date	14 July 2026
Team ID	XXXXXX
Project Name	EduGenie – AI-Powered Educational Assistant
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for EduGenie. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy the solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / dependency file	Yes
4	Database schema / seed files (if applicable)	NA
5	Environment configuration file (.env.example or similar)	Yes
6	Deployed application URL (if hosted)	Yes
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	No
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

Overview of EduGenie's project file and folder structure:

```

/edugenie-root
/app      - FastAPI application entry point and routers
/services - Question answering, quiz, summarization, learning path modules
/models   - Request/response schemas
/frontend - HTML/CSS interface files
/tests    - Test files
/docs     - Documentation
README.md - Setup and run instructions
requirements.txt - Python dependencies
.env.example - Sample environment configuration
  
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	
Login Credentials (Demo)	Not required – EduGenie does not require login for the demo
Platform / Hosting Provider	Local deployment (Uvicorn); cloud hosting planned for future release
Repository Link	
Demo Video Link	

Step 4: Run Instructions

Step-by-step instructions for the evaluator to run EduGenie locally:

Pre-requisites:

Python 3.10+, pip, a modern web browser, and a Google Gemini API key

Step 1: Clone the repository: `git clone <repository-url>`

Step 2: Install dependencies: `pip install -r requirements.txt`

Step 3: Configure environment: copy `.env.example` to `.env` and add your Gemini API key

Step 4: Start the backend: `python -m uvicorn app.main:app --reload`

Step 5: Open the frontend: open `frontend/index.html` in your browser (or serve it via a local server)

Step 6: Access the API docs at <http://127.0.0.1:8000/docs>

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Occasional delay in AI response during peak API load	Retry mechanism in place; caching planned
2	No persistent database – history stored in local JSON files	Database integration planned for future release
3	Single-language support (English) only	Multilingual support planned in future roadmap
